

## StartEFT

is a robust Automated Clearing House (ACH) transaction management system for today's payment environment.

StartEFT provides its users with the functionality needed to easily manage recurring and one-time ACH transactions. As a Web-based software solution, it provides you with secure access to transaction information when you need it the most.

### What can StartEFT do?

StartEFT is a Web-based program that manages your customers' payment information. You simply enter your customers' banking information and payment schedule. The software will then process the transactions through the ACH network.

StartEFT allows multiple or single debits and credits to consumers and corporations. These debts and credits can be fixed or varying amounts and can be sent to checking and savings accounts. With StartEFT, you can take payment information contractually or over the telephone or fax. ACH acceptance has never been so easy.
